Our products are made from quickly renewing natural resources and are therefore not harmful to our environment. The abundant wheat and reed plants used to manufacture our product line are easily replenished yearly, saving countless trees.

Our renewably sourced golf tees, divot tools and ball markers are fully personalized with no minimum order requirements! A cutting edge printing technology further promotes environmental intelligence as there is no longer a need for printing plates, films or hazardous chemical waste.

In a world where "going Green" is the best way to go, our products will help you show your customers, colleagues and partners that you care for the environment. BioGolfTee products make it easy to create a long lasting impression of an organization that is innovative and yet environmentally conscious.

We've focused on the quality so you can focus on your game! The tip of the tee has the precise radius and finely cut edges for the perfect ball fit!

BioGolfTees are made from natural resources like wheat starch and reed plants. These materials make firm but flexible tees that bend but do not break thus proving stronger and more resilient than traditional wooden tees.

Nominated for the German design award and winner of the international ISPO Sports Design award, the BioGolfTee is the first environmentally friendly golf tee to win an internationally respected and highly prestigious award for design and functionality.
